

## STANDARD FEATURES

- Tier 4, 24.8 HP Kubota diesel engine
- AR triplex plunger pump available in 5,000 PSI at 5.5 GPM and 3,500 PSI at 8 GPM
- 25-gallon diesel fuel tank (max. 12.5 working hours per tank)
- 12V battery in marine-grade battery box
- Burner and heating coils for hot water cleaning with redundant safety monitoring.
  - Over-temperature safety switch
  - Positive flow switch
  - Positive pressure switch
- Ultra-low center-of-gravity design on heavy-duty galvanized steel trailer, including 14-ply grade tires, spare tire, fire extinguisher, 5,200 lb. axle capacity, and 2,500 lb. tongue jack with 12.5" stroke
- Polycarbonate-shielded control panel
  - E-stop
  - Engine controls
  - Glow plug operation for cold starts
  - Engine over-temperature protection
  - Burner control
  - Hour meter
  - Volt meter
- UV-resistant 225-gallon black water tank with clear sight gauge, stainless steel removable filter basket with #2 trade size 5-micron bag filter
- Remote water tank fill for quick and easy filling without opening the tank and exposing to contaminants
- 3,200 lb. dry weight

## OPTIONAL FEATURES

- Telescoping 9', 7,000-lumen light mast with two 12 VDC LED work lights
- Hose and gun rack
- Winterization kit
- 425-gallon water tank

Tier 4, 24.8 HP Kubota Diesel Engine

Black Water Tank with Filter and Sight Gauge

# JETECH

## XP305

## INDUSTRIAL HOT WATER PRESSURE WASHER TRAILER

The XP305 is an industrial-grade hot water pressure washer designed to be a plug-and-play system for hours of cost-saving, trouble-free operation for the toughest jobs.

### Eliminate Downtime from Dirty Water

The Jetech design uses a unique black water tank with a clear sight gauge to overcome the largest failure in the field—dirty water! The black tank prevents algae growth and the additional stainless steel removable filter basket with 5-micron bag filter prevents contaminants from entering the inlet.

### Road Ready

Operators can hitch the purpose-built, heavy-duty trailer with 14-ply tires for smooth and easy towing, even with a full water tank. With the units pre-mounted, owners can save money by tagging the trailer with machinery tags.

### Safe and Low-Maintenance Operation

This simple, safe turnkey system is built with high-quality components so your team can focus on completing the job without interruption.

### Increase Your Productivity Without Adding Another System

The single-axle XP305 unit is capable of running both automated operations and two pressure guns. Not sure how many modules you will need? No problem, the dual-axle XP305 can be configured with up to three modules, which can be added as your team grows.

For more 30 years, Jetech, Inc. has engineered pumps and pump units for ultra-high pressure applications. More than 5,000 pumps have been used globally due to the proprietary AD Liquid End design. Products have been field-proven in several industrial and commercial industries, including petro-chemical, water and waste-water treatment, food and beverage, construction, industrial cleaning, and other ultra-high pressure applications. Contact us about water-jetting systems and accessories, industrial pressure washers, bare-shaft pumps, and submersible pumps.

# XP305

JETECH

The XP305 is a hot water pressure washer with a temperature range of 130-210°F. The robust design uses a single diesel fuel tank for both the engine and the burner for ease-of-use and is sized to outlast the most demanding shifts.

**A** Easy-to-use remote inlet fill system to fill exclusive closed-tank system

**B** The fast-drain tank incorporates a #2 filter basket with 5-micron bag filter to reduce small particulates from the inlet water and redundant inline wye strainer to protect the pump and reduce service to the water line

**C** Redundant burner fuel control system, uses one fuel tank for burner and engine

**D** Polycarbonate-shielded control panel

- E-stop
- Engine controls
- Glow plug operation for cold starts
- Engine-over temperature protection
- Burner control
- Hour meter
- Volt meter

**E** Ultra-low center-of-gravity design on heavy-duty galvanized steel trailer, 14-ply tires

## Custom Configurations

The dual-axle XP305 can be configured with single, dual, or even triple modules all on the same compact trailer, increasing productivity while reducing the need for additional systems.

Single Module on Dual Axle Trailer

Dual Module on Dual Axle Trailer

Triple Module on Dual Axle Trailer
